

Close to 11 million messages exchanged in 2024

Success

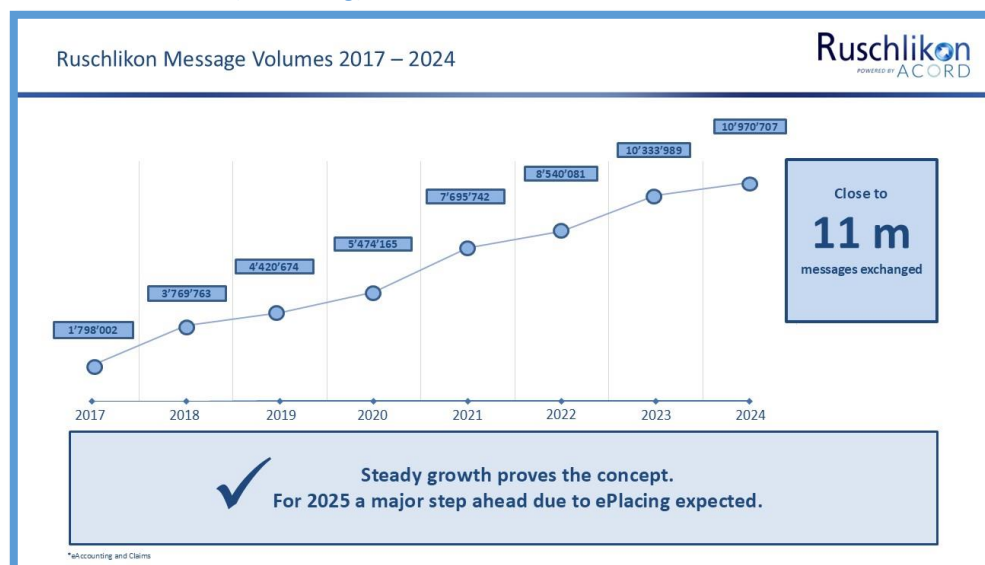

Steady growth proves the concept

The 2024 eMessaging volume figures for accounting, claims, financial handling, and post-placement have been aggregated recently.

The community can proudly report that close to 11 million messages were exchanged amongst major industry partners, despite the continuous impact of merger and acquisition activities that can temporarily disrupt automated data exchange.

Acrisure Re, Aon, AXA XL, Everest Group, Gallagher Re, Guy Carpenter, Hannover Re, Howden Group, Liberty Speciality, MAPFRE RE, Munich Re, PartnerRe, QBE Re, RenaissanceRe, SCOR, Swiss Re, Transatlantic Reinsurance and WTW contributed to this success. All those companies are committed to jointly transform the industry towards an end-to-end digital (re)insurance administration in line with Ruschlikon best practises and ACORD GRLC data standards.

Learn more on how our industry partners steer the implementations, lessons learned and ultimately what tangible benefits they get from their implementations. Check out our case study library for recordings and documentation: [Case Studies \(acord.org\)](https://www.acord.org/case-studies).
