Status Update

Are you interested in understanding how Ruschlikon and Distributed Ledger Technology collaborate?

The common interests are:

- **Ambition** - automation of all interactions in the (re)insurance industry
- **Community** - all (re)insurance industry players
- **Value chain** - end-to-end exchanges from insureds to capital markets
- **ACORD standards** - common language allowing seamless integration
- **Business case** – adherence to Ruschlikon Best Practices and process standards

In brief, the recommendation to the industry is as follows:

A consolidated system and process landscape following the ACORD data structure is the foundation required to on-board Ruschlikon Best Practice and any of the Distributed Ledger Technology initiatives.

Immediate benefits (for both new and ongoing business) can be realised by joining the global Ruschlikon community, which has grown extensively for over 10 years. It has established and matured best practice guidelines and can cover data exchange throughout the (re)insurance life cycle.

If you want to read more, check out the revised document in full length:

Collaboration between Ruschlikon and Distributed Ledger Technology

Irène Koller, Swiss Re and Ruschlikon Marketing Group Chair
